**Designer Series Wall Mounted Dispensers vs. The Competition**

- **Proprietary Top Dispensing Technology**
  - user sees soap being dispensed, meaning fewer pushes and less soap wasted

- **No Leak Guarantee**
  - due to top valve placement

- **Dispenses Foam and Liquid Soaps, and Foam and Gel Hand Sanitizers**

- **ADA Push Compliant, ADA 4” Wall Protrusion Option Available**

- **Large View Window with Customizable Product Identification Window Card**

- **Available in Black, Gray, White/Gray, Black/Chrome, All White, Multi-color**

- **Reduced Packaging**
  - uses 50% less plastic than hard cartridges

- **Pump Spring Will Not Wear Out**
  - it is in the refill, not the dispenser

- **Bottom Dispensing**
  - user unable to see soap being dispensed, meaning extra pushes and more soap wasted

- **More leaks due to bottom valve placement**

- **Soaps and sanitizers may require different dispensers**

- **No Product Identification**
  - user does not know if product is hand soap, hand sanitizer, etc.

- **Cartridge Manipulation**
  - top of cartridge can be cut open to accept bulk fill product

- **Spring to dispense product is attached to the dispenser and will wear out over time**

EASE OF USE:
Foam soap is much easier to use than Liquid soap.
- Dispensed Foam is thick and stays on your hands, while Liquid tends to run off your hands and down the drain.
- Foam is pre-lathered and ready to use, while Liquid takes time to lather up and work into your skin.

SOAP SAVINGS:
Converting from Liquid to Foam reduces the amount of soap used per handwash.
- Most Liquid Bulk and Bag-In-Box systems dispense 1.5 mL of soap per handwash, while our Foam system only requires 0.75 mL or half the amount.
- The same size refill of Foam soap should provide twice as many handwashes or last twice as long!

WATER SAVINGS:
Converting from Liquid to Foam will also save gallons of water!
- Since Foam is pre-lathered and has lower viscosity, it reduces the lather up and rinse time per handwash by 5 seconds or more.
- An average faucet runs at 50 mL per second, saving 250 mL per handwash (5 seconds x 50 mL = 250 mL)
- You can save 66 gallons of water for every 1,000 handwashes! (1,000 x 250 mL = 250,000 mL / 3,785 mL per Gal = 66 Gallons)
