

FOAM SOAP VS. LIQUID SOAP BENEFITS

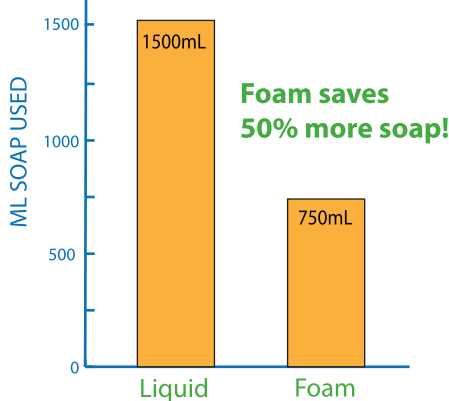

EASE OF USE

Foam soap is much easier to use than liquid soap.

- Dispensed foam is thick and stays on hands, while liquid tends to run off hands and down the drain.
- Foam is pre-lathered and ready to use, while liquid takes time to lather up and work into skin.

SOAP USED

PER 1000 HANDWASHES

SOAP SAVINGS

Converting from liquid to foam reduces the amount of soap used per handwash.

- Most liquid bulk and bag-in-box systems dispense 1.5 mL of soap per handwash, while our foam system only requires 0.75 mL or half the amount.
- The same size refill of foam soap should provide twice as many handwashes or last twice as long!

WATER SAVINGS

Converting from liquid to foam will also save gallons of water!

- Since foam is pre-lathered and has lower viscosity, it reduces the lather up and rinse time per handwash by 5 seconds or more.
- An average faucet runs at 50 mL per second, saving 250 mL per handwash. (5 seconds x 50 mL = 250 mL)
- You can save 66 gallons of water for every 1,000 handwashes!
(1,000 x 250 mL = 250,000 mL / 3,785 mL per Gal = 66 Gallons)
